Professional Summary

Mid-level Full Stack Developer with 2+ years of experience building scalable web applications using Laravel, React, and Django. Proven track record of optimizing system performance (50% server load reduction) and delivering complex systems such as automated academic scheduling engines and Learning Management Systems. Adept at Clean Architecture, SOLID principles, and delivering measurable business impact across backend and frontend domains.

Professional Experience

Backend Developer, *Our Education for Investment*

12/2024 – Present

- Developed and maintained a custom Learning Management System (LMS) serving educational institutions, enabling structured management of courses, users, sessions, and academic workflows for hundreds of students.
- Designed and implemented a reusable Laravel package to modularize LMS and timetable functionality, achieving clean separation of concerns and improving scalability, maintainability, and development efficiency across the team.
- Built an automated academic timetable generation system comparable to ASC Timetables, producing complete conflict-free schedules in under 3 seconds while handling complex constraints including teachers, classrooms, grades, branches, and overlapping sessions.
- Architected a virtual timetable solution with live sessions and attendance tracking, supporting real-time schedule adjustments without full regeneration to ensure high performance and system consistency.
- Designed and delivered RESTful APIs exposing core business capabilities, enforcing Clean Architecture boundaries and SOLID/DRY principles to maintain a robust and extensible system design.

Technologies: Laravel, PHP, MySQL, PostgreSQL, REST APIs, Python, Docker, Git

Full Stack Developer, *Nozolan*

11/2023 – 11/2024

- Designed and implemented a UI Component Library serving 15 cross-functional teams, enhancing design consistency across platform applications and significantly reducing project turnaround times.
- Implemented a robust advertising framework on digital displays, optimizing ad placements for maximum visibility, resulting in a 40% rise in viewer interactions and a \$15,000 increase in ad revenue within the first quarter.
- Optimized query performance using indexing, caching, and query refactoring techniques, achieving a 50% decrease in server load and a 30% increase in user satisfaction.
- Integrated third-party APIs (including Stripe, social media, and real-time notification services) to enhance platform functionality, leading to a 40% increase in user activity.
- Revamped the payment interface by integrating an automated reconciliation tool, reducing transaction errors by 30% and improving the overall experience for 5,000+ monthly users.
- Developed a user-friendly dashboard providing seamless access to live data and interactive features, resulting in a 35% increase in user engagement.

Technologies: TypeScript, React.js, Material UI, Python, Django

Projects

Shafie App [View on Google play](#)

- Architected and developed a scalable backend for a Quran memorization platform, delivering real-time voice-based recitation sessions, audio streaming, progress tracking, and instructor assessment workflows using Laravel, MySQL, RESTful APIs, and Agora RTC, while enforcing Clean Architecture principles to maximize performance, maintainability, and long-term scalability.

Maeda App [View on Google play](#)

- Spearheaded the backend architecture of a nationwide Ramadan charity platform, engineering scalable services for geospatial charity table discovery, map integration, verification workflows, and real-time user notifications, while optimizing API performance and database efficiency to reliably handle significant spikes in seasonal traffic.

Revo Pharmacy App [View on Google play](#)

- Designed and delivered the backend architecture for a pharmacy e-commerce ecosystem, developing scalable microservice-ready APIs, secure payment and storage integrations, real-time communication workflows, and operational analytics capabilities, while ensuring reliability, maintainability, and performance across customer-facing and administrative applications.

Electronic Auction [View on GitHub](#)

- Engineered an electronic auction platform enabling users to display products with bidding prices, receive real-time bid notifications, and automate higher bids — resulting in a 50% increase in bid engagement.
- Integrated Stripe for secure electronic payments and automated Facebook page posting, achieving a 30% increase in platform visibility and a 90% user satisfaction rate.

Pizza App [View on GitHub](#)

- Developed a full-featured pizza ordering app with password reset, email confirmation, real-time order tracking, favorites, discount coupons, and multiple payment options (Visa and cash on delivery), increasing user retention by 25%.
- Introduced user experience and loyalty features that led to a 40% increase in app usage frequency.

E-Shop [View on GitHub](#)

- Built an e-commerce platform with JWT authentication, advanced search, sorting, filtering, and a star rating system, resulting in a 15% increase in user engagement.
- Supported multiple payment methods including Stripe and streamlined checkout, reducing cart abandonment rates by 20%.

Skills & Technologies

Backend: PHP, Laravel, Python, Django, Node.js, REST APIs

Frontend: TypeScript, JavaScript, React.js, Vue.js, Next.js, Redux, Tailwind CSS, Material UI

Databases: MySQL, PostgreSQL

DevOps & Tools: Docker, Git, Jenkins, AWS

Languages: Python, JavaScript, TypeScript, PHP, C/C++, SQL

Education

Bachelor of Computer Science, Menofia University

09/2020 – 06/2024 | Menofia, Egypt

Relevant Coursework: Data Structures, Algorithms, Database Systems, Web Development, Software Engineering, Cloud Computing

Academic Projects: Library management system, real-time chat application, social media platform prototype

Certifications

Frontend React.js

ITI | 2023

Comprehensive training in React.js fundamentals, component architecture, state management, API integration, and deployment.
